

The Chicago Pilot Examiner Association has recognized the proliferation of advanced technology in aviation. In response to that change, standardization of testing practices needed to be established and implemented. The following document has been prepared to describe how the latest technology will be used in testing. Care was taken to review applicable Federal Aviation Regulations and Practical Test Standards to ensure that our procedures are in compliance. The Flight Standards District Office has reviewed this document and finds nothing inconsistent with existing FAA guidance, and supports the group in our efforts to standardize how tests are conducted.
